

INDEX TO VOLUME 22

- Abstracts, 285
 Acid lipase, analytical subcellular fractionation with special reference to; the retinal pigment epithelium, 519
 Affinity of melanin for inorganic ions, 487
 Age, changes in the corneal endothelium as a function of, 587
 Aging, development and cataract, a review of structural proteins of the mammalian lens with emphasis on changes in, 1
 Albino and pigmented rabbits, naphthalene cataract in, 393
 ——— rats, the slow ERG potentials in hereditary retinal dystrophy of, 493
 ———, black, and beige mice, light-induced alterations of retinal pigment epithelium in, 549
 Alcohol dehydrogenase and retinol dehydrogenase in bovine retinal pigment epithelium, 367
 Amphibian lens, in vitro effects of hyperosmotic agents on the electrical properties of, 195
 Anatomy and fine structure of the eye in teleost: the choriocapillaris and the dual vascularization of the area centralis in *Fundulus grandis*, 169
 Anterior chamber paracentesis, an inexpensive blowgun device for, 193
 ——— polar and posterior subcapsular cataract in a patient with retinitis pigmentosa: a light-microscopic and ultrastructural study, 155
 Aqueous humor formation, intraocular pressure and outflow facility in rabbits, effect of parasympathetic stimulation on, 639
 ——— in cortical, nuclear, and complicated cataracts, the alpha-crystallin content of, 75
 ———, lens and vitreous of rabbit, phospholipid distributions and fatty acid composition of lysophosphatidylcholine and phosphatidylcholine in, 569
 Area centralis, the choriocapillaris and the dual vascularization of, in *Fundulus grandis*; the anatomy and fine structure of the eye in teleost, 169
 ARYA, D. V. (see MILLER, S. P.), 329
 AU, P. C. (see POTTS, A. M.), 487
 Autoradiographic study of the pigment epithelial cell surface receptor for plasma retinol-binding protein; transport of retinol from the blood to the retina, 395

 BALAZS, E. (see DOHLMAN, C. D.), 359
 BANDO, M., NAKAJIMA, A., NAKAGAWA, M. and HIRAOKA, T., Measurement of protein distribution in human lens by microspectrophotometry, 389
 BEEBE, D. C. and PIATIGORSKY, J., Differential synthesis of crystallin and noncrystallin polypeptides during lens fiber cell differentiation in vitro, 237
 Beige, black, and albino mice, light-induced alterations of retinal pigment epithelium in, 549
 BELLHORN, M. B. and LEWIS, R. K., Localization of ions in retina by secondary ion mass spectrometry, 505
 BENTLEY, P. J. (see YORIO, T.), 195
 BERGSMAN, D. (see REDFERN, N.), 559
 ———, D. R. (see WIGGERT, B. O.), 411
 BERMAN, E. R. (see ROTHMAN, H.), 519
 ———, M. B., CAVANAGH, H. D. and GAGE, J., Regulation of collagenase activity in the ulcerating cornea by cyclic-AMP, 209
 BERROSPÍ, A. R. (see LAING, R. A.), 587
 Binding of concanavalin A to the rod outer segments and pigment epithelium of normal and RCS rats, 469
 ——— specificity, aspects of; retinol and retinoic acid-binding proteins in bovine retina, 419
 Black, albino, and beige mice, light-induced alterations of retinal pigment epithelium in, 549
 Blood, transport of retinol to the retina from: an autoradiographic study of the pigment epithelial cell surface receptor for plasma retinol-binding protein, 395
 ———, ———, ———, ———, ———: involvement of high molecular weight lipoproteins as intracellular carriers, 403
 Blowgun device, inexpensive, for anterior chamber paracentesis, 193

- BOK, D. and HELLER, J., Transport of retinol from the blood to the retina: an autoradiographic study of the pigment epithelial cell surface receptor for plasma retinol-binding protein, 395
 ——— (see HALL, M. O.), 595
 ——— (see HELLER, J.), 403
- Bovine and human retinal pigment epithelium, an in vitro model of phagocytosis in, 533
 ——— retina, retinol and retinoic acid-binding proteins in: aspects of binding specificity, 419
 ———, retinol-binding protein in: isolation and partial characterization, 425
 ——— retinal pigment epithelium, alcohol dehydrogenase and retinol dehydrogenase in, 367
- BRENNER, S. L. and PARSESIAN, V. A., Suggested explanation for the anomalous temperature dependence of the corneal swelling pressure, 95
- BRIDGES, C. D. B., Vitamin A and the role of the pigment epithelium during bleaching and regeneration of rhodopsin in the frog eye, 435
- BROEKHUYSE, R. M. and SOETING, W. J., Lipids in tissues of the eye XV. Essential fatty acids in lens lipids, 653
 ——— (see ROELFZEMA, H.), 85
- BRON, A. J. (see DILLEY, K. J.), 155
- BURKE-GADOMSKI, P. (see FARNSWORTH, P. N.), 615
- Calcium and magnesium content of rodent photoreceptor cells as inferred from studies of retinal degeneration, 219
 ——— in the migration of retinal screening pigment in the frog, a role for, 377
- Calf lens, synthesis of sphingomyelin in; lipids in tissues of the eye, 85
- Carriers, intracellular, involvement of high molecular weight lipoproteins as, in transport of retinol from the blood to the retina, 403
- Cataract, aging and development, a review of structural proteins of the mammalian lens with emphasis on changes in, 1
 ———, anterior polar and posterior subcapsular, in a patient with retinitis pigmentosa: a light-microscopic and ultrastructural study, 155
 ———, naphthalene, in pigmented and albino rabbits, 393
- Cataractous crystalline and normal lens, photomicrography of, 281
- Cataracts, cortical, nuclear and complicated, the alpha-crystallin content of aqueous humour in, 75
- CAVANAGH, H. D. (see BERMAN, M. B.), 209
- Cells, epithelial, of the mature human lens, surface ultrastructure of, 615
 ———, lens fibre, a method to demonstrate the fine structural components of, 125
- CHADER, G. (see REDFERN, N.), 559
 ——— G. J. (see WIGGERT, B. O.), 411
- Chick embryo, scanning electron microscopy of lens placode invagination in, 647
- Choriocapillaris and the dual vascularization of the area centralis in *Fundulus grandis*; the anatomy and fine structure of the eye in teleost, 169
- CHYLACK, L. T. (see GREINER, J. V.), 281
- Ciliary epithelium and the drainage angle of cynomolgus monkeys, the effects of prostaglandin E₁ on; a light- and electron-microscopic study, 141
- CINOTTI, A. A. (see FARNSWORTH, P. N.), 615
- Collagenase activity in the ulcerating cornea, regulation by cyclic-AMP, 209
- Concanavalin A, its binding to the rod outer segments and pigment epithelium of normal and RCS rats, 469
- Contact lenses, soft, effect on limbal wound healing, 611
- COPELAND, D. E., The anatomy and fine structure of the eye in teleost IV. The choriocapillaris and the dual vascularization of the area centralis in *Fundulus grandis*, 169
- Cornea, ulcerating, regulation of collagenase activity by cyclic-AMP, 209
- Corneal and scleral differentiation in the primate, some aspects of, 305
 ——— endothelium, changes in, as a function of age, 587
 ——— in vivo: its response to mild trauma, 347
 ——— swelling pressure, suggested explanation for the anomalous temperature dependence of, 95
- Cortical, nuclear and complicated cataracts, the alpha-crystallin content of aqueous humour in, 75
- COTLIER, E. (see KIM, J. O.), 569
- Crystallin and noncrystallin polypeptides, differential synthesis of, during lens fiber cell differentiation in vitro, 237

- α -Crystallin content of aqueous humour in cortical, nuclear and complicated cataracts, 75
 δ -Crystallin mRNA, molecular weight and sequence complexity of, 115
 Crystalline normal and cataractous lens, photomacrography of, 281
 Cyclic-AMP and prostaglandins, their effects on pigmentation; neural retinal and pigment epithelial cells in culture, 559
 —, regulation of collagenase activity in the ulcerating cornea by, 209
 Cynomolgus monkeys, the effects of prostaglandin E_1 on the ciliary epithelium and the drainage angle of; a light- and electron-microscopic study, 141

 Debris accumulation, guanosine 3',5' cyclic monophosphate changes and photoreceptor cell degeneration in retina of RCS rats, a proposed link between, 477
 —, lipid composition of; hereditary retinal dystrophy in the rat, 101
 Development, aging and cataract, a review of structural proteins of the mammalian lens with emphasis on changes in, 1
 Differential synthesis of crystallin and noncrystallin polypeptides during lens fiber cell differentiation in vitro, 237
 Differentiation patterns and effects of prostaglandins and cyclic AMP on pigmentation; neural retinal and pigment epithelial cells in culture, 559
 DILLEY, K. J., BRON, A. J. and HABGOOD, J. O., Anterior polar and posterior subcapsular cataract in a patient with retinitis pigmentosa: a light-microscopic and ultrastructural study, 155
 — (see HARDING, J. J.), 1
 DOHLMAN, C. D., FRIEND, J., KALEVAR, V., YAGODA, D. and BALAZS, E., The glycoprotein (mucus) content of tears from normals and dry eye patients, 359
 Drainage angle and ciliary epithelium of cynomolgus monkeys, the effects of prostaglandin E_1 on; a light- and electron-microscopic study, 141
 Dry eye patients and normals, the glycoprotein (mucus) content of, 359
 Dystrophy, retinal, hereditary, in the rat: lipid composition of debris, 101
 —, —, —, of albino and pigmented rats, the slow ERG potentials in, 493

 EDGAR, W. (see FORRESTER, J. V.), 181
 Electrical properties of the amphibian lens in vitro, the effects of hyperosmotic agents on, 195
 Electron- and light-microscopic study of the effects of prostaglandin E_1 on the ciliary epithelium and the drainage angle of cynomolgus monkeys, 141
 Electron microscopy, scanning, of lens placode invagination in the chick embryo, 647
 Electronmicroscopical, histochemical and biochemical findings on the Na-K-ATPase activity in the epithelium of the rat lens, 229
 Embryo, chick, scanning electron microscopy of lens placode invagination in, 647
 Endothelium, corneal, changes in, as a function of age, 587
 —, —, in vivo: its response to mild trauma, 347
 Enzymes, some, in tear fluid, the origin of, determined by comparative investigation with two collection methods, 267
 Epithelial cells of the mature human lens, surface ultrastructure of, 615
 Epithelium of the rat lens, electronmicroscopical, histochemical and biochemical findings on the Na-K-ATPase activity in, 229
 ERG potentials, slow, in hereditary retinal dystrophy of albino and pigmented rats, 493
